

```
https://thobias.org/docker/index.html  
ping goo.gl->checking network connection  
curl -sSL https://get.docker.com | sh
```

Installation of Docker

```
cd /etc/yum.repos.d/  
gedit docker.repo  
[docker] -q cd  
baseurl= https://download.docker.com/linux/centos/7/x86_64/stable/  
gpgcheck=0 (disable the serial checking of the software)  
yum install docker-ce --nobest -> (nobest choose most compatible file and download it)  
systemctl start docker-> (it start your docker services)  
systemctl enable docker
```
